

The Digital splitter allows more than one brake trigger to be used at the same time into the Brake trigger input of a VBOX, it also allows an external Start/ Stop logging switch to be connected to the same VBOX socket at the same time.

The Digital splitter consists of one flying lead terminated with a 3 way Lemo plug and three 3way lemo sockets. Each pin from each of the three sockets and the one plug are joined to the same corresponding pins on each of the other sockets.

Connection details

Trigger output – 3 Way Lemo

Pin	In/Out	Function
